

BUILDING STONE

Syreford Quarries & Masonry Ltd produce natural Cotswold building stone from our own Quarry and we also source various colours and specifications of building stone to suit clients requirements, ranging from rustic looking rough dressed building stone through to the smooth and polished faced Ashlar stone.

Our building stone is produced using both traditional and modern methods of working adhering to strict quality control guidelines. This therefore ensures that quality and consistency of product is extremely high enabling production levels to meet delivery schedules and programmes. All our building stones are produced to suit current UK building regulations as facing materials.

Our building stone range is suitable whether using traditional construction techniques or the most innovative cladding solution for both new build projects and also for extensions and refurbishment projects.

Our experienced and professional team will be able to assist from early stages of specification and design through to working together to complete the project and meet tight delivery programmes and schedules.

Rough Dressed Building Stone

Rough dressed building stone gives a 'rustic' appearance to the stone, as the course heights are irregular/ or as dug from the seams in the quarry. The stone is also supplied in random lengths. Course heights can be selected and supplied in bags accordingly and are generally supplied between 75mm and 180mm. The stone is cropped on bed to 115mm / 125mm

Ashlar Building Stone

Ashlar building stone is sawn on all six sides and polished on one face to produce a smooth sided building product. Ashlar is produced to your specifications based upon bed, height and length dimensions. The course width is generally 100mm

Sawn & Split Building Stone

Sawn and split building stone is sawn on the top and bottom bed. This allows it to be laid easily, and creates a more symmetrical appearance than the rough dressed stone. It is usually supplied with a lightly tumbled finish which knocks off sharp corners and edges to produce a more natural appearance. It is available in course heights of 65mm, 90mm, 115mm & 140mm or other upon request.

We are happy to supply samples of all our building stone, free of charge, so that you can take your time to assess them at your leisure and compare them to others which you may be considering. In the event that you would like sample panels of building stone for planning or decision making purposes, this can be arranged.
