

## FIREPLACES

We produce beautifully crafted stone fireplaces which are hand carved and can be used with gas, solid fuel, electric or an enclosed stove fire and wood burner. Each and every fireplace that is produced and worked by ourselves is truly unique. Our masons select the very best limestone to help them create a truly stunning finished fireplace.

Our vast experience and knowledge of working with stone enables us to assist our clients with the design and specification using the wide range of natural limestone colours that are available to us. The natural finish of the limestone enables ourselves to create fireplaces which will compliment both a traditional or a contemporary environment.

## FLAGSTONES & FLOORING

Syreford Quarries & Masonry Ltd produce a wide range of natural flagstones and flooring products. All our products use the very best stone and are cut to your individual requirements. In addition to our Syreford Stone, we also use a selection of other limestones from local quarries. This enables us to be able to offer our clients a great range of colours and finishes from very fine, tight grained flooring to open grained antique style flagstones.

The unique qualities and charms from using a natural limestone enables us to create a finished product that is perfect for both traditional and contemporary environments. Our flooring can feature cabouchons in the same or a contrasting stone. All our flagstones can be complimented with a limestone skirting and stair treads / risers designed to your exacting requirements.

Our flagstones and flooring products are suitable specifically for internal use and covered external areas. The standard thickness is 25mm which works perfectly with under floor heating.
